DETAILED ACTION

REASONS FOR ALLOWANCE

1. Claims 1-6, and 9-41 are allowed over the prior art of record.

2. The following is an examiner's statement of reasons for allowance:

The applicant's Remarks, filed on 08/17/2005, have been carefully reviewed with update search. Consequently, reasons for allowance of claims 1-6, and 9-41 are set forth in according to the applicant's remarks stated on pages 15-16.

Regarding claims 1, 29, and 37, the prior art made of record fails to clearly teach or fairly suggest, the logical consequent steps of a method and an integrated tuner comprising a local oscillator generation circuit, differential direct conversion mixer, a differential tunable low pass filter, and a LO correction circuits coupled between the LO generation circuit and the differential direct conversion mixer, that is configured to adjust an amplitude level of said differential LO oscillator signal to improve performance of the a differential direct conversion mixer, the LO correction circuit including a variable amplifier that variably amplifies the differential local oscillator signal according to a control signal; and a level detect circuit connected to the output of the variable amplifier, that generates the control signal based on an output level of the variable amplifier, in combination with other limitations, as specified in the independent claims 1, 29, and 37, and further limitations of their respective dependent claims 1-5, 9-26, 30-36, and 38-41.

Regarding claim 6, the prior art made of record fails to clearly teach or fairly suggest, the feature of an integrated tuner comprising a local oscillator generation circuit, differential direct conversion mixer, a differential tunable low pass filter, plurality

of polyphase circuits that correspond to the plurality of VCOs, and wherein the plurality of VCOs are connected to the plurality of the polyphase circuits by a plurality of amplifiers, wherein a VCO is selected by enabling one or more of the amplifiers that correspond to the selected VCO, and disabling more one or more amplifiers that do not correspond to the selected VCO, in combination with other limitations, as specified in the independent claim 6.

Regarding claim 27, the prior art made of record fails to clearly teach or fairly suggest, the feature of an integrated tuner comprising a local oscillator generation circuit, differential direct conversion mixer, a differential tunable low pass filter, a DC servo circuit, and wherein the DC servo circuit includes a first transconductance amplifier connected to an output of the second base band amplifier; a low pass filter connected to an output of the first transconductance amplifier; a second transconductance amplifier connected to an output of the low pass filter, an output of the second transconductance amplifier connected 180 degrees out-of-phase with an output of a third transconductance amplifier, the third transconductance amplifier part of the first base band amplifier, in combination with other limitations, as specified in the independent claim 27, and further limitations of their respective dependent claim 28.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
